

Fast Forward Digital Transformation

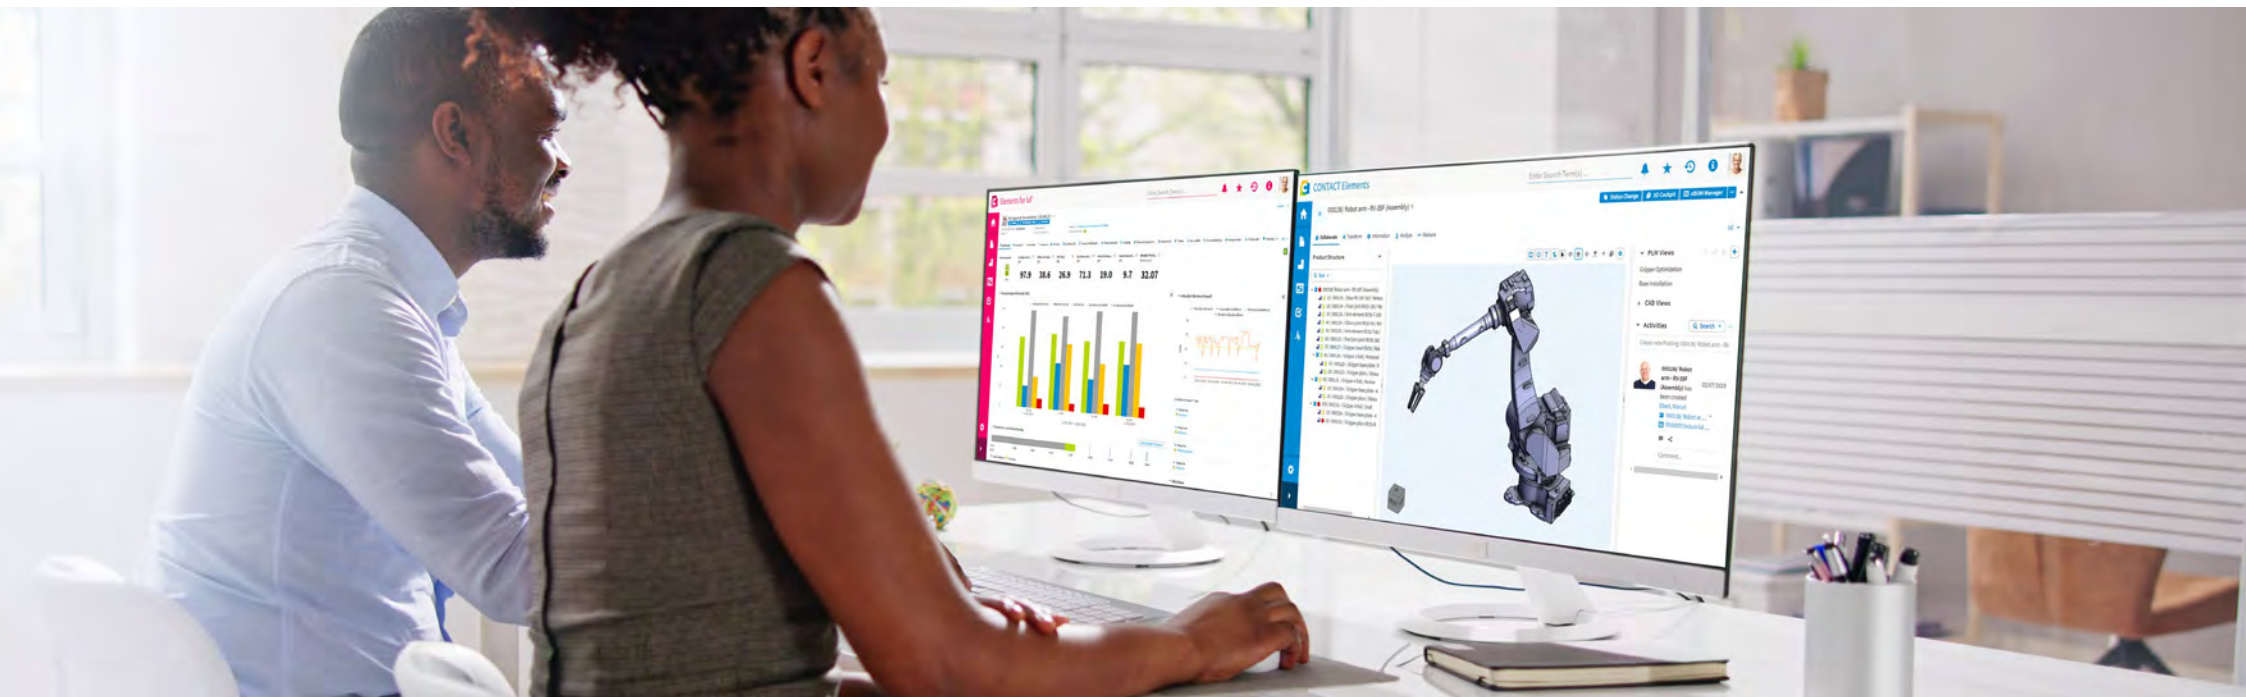

Designing and operating smart products successfully

The best software for your digital transformation

CONTACT Software is open source pioneer for the product development process and digital transformation. Our products help to organize projects, execute reliable processes, and work together worldwide using virtual product models and the digital twin. Our open technology and our CONTACT Elements platform are ideal for connecting IT systems and the Internet of Things for end-to-end business processes. Success in PLM and IoT projects requires more than just good

software. The combination of technology, process consulting, and a strong implementation strategy is essential. That's why we position ourselves as a strategic partner, offering comprehensive support for our customers' digital transformation. From leveraging artificial intelligence and sustainable manufacturing practices to designing energy-efficient factories and developing innovative business models, we're here to drive holistic progress. We identify the potential and derive

a digitalization roadmap with realistic sub-projects that we implement together. This enables our customers to grow step by step. Many years of experience from numerous successful customer projects make us experts in digitalization. We understand your complex challenges and deliver state-of-the-art technologies and proven solutions first-hand.

Set your own pace!

...and many more

All of CONTACT's software products are designed to accelerate and streamline the digital transformation of industries. Whether global corporations or small and medium-sized companies - the modular platform enables companies from different sectors, such as automotive, machinery, medical, consumer, infrastructure, retail, or hightech, to flexibly compile specialist applications for their specific needs. Our customers determine the focus and pace of their transformation themselves.

CONTACT **Elements**

the world's best platform to design and
operate smart products

“CONTACT’s approach to digital threads based on CONTACT Elements’ open web architecture, configurable data model, and composable reusable components enables companies to break down silos and connect their data and processes across the product lifecycle from concept through life.

*Mark Reisig, CIMdata 2024,
on CONTACT as enabler for digital threads*

Products and services

We offer companies the best software with AI-based technologies to simplify the use of digital product data – on-premises and in the cloud. Efficient processes, smooth teamwork, and fewer routine tasks help to focus on even better products and services. The foundation for all our products is the CONTACT Elements platform.

PLM SYSTEM FOR BETTER COLLABORATION AND PROCESSES

CIM Database PLM supports every phase along the entire product lifecycle. We combine the management of product data using virtual models and the digital twin with functions for collaboration and process and project management. Our customers increase efficiency, automate routine tasks, fulfill regulations more easily, conserve resources, and improve their results.

SUCCESSFUL ENGINEERING PROJECTS WITH RELIABLE PROCESSES AND AGILE TEAMWORK

Project Office combines classic and agile teamwork. Companies use it to systematically plan and control entire campaigns and the projects of agile development teams. The software links complex structures of engineering process results with classic project elements to create a single source

of truth. This way, project and controlling teams, along with management, always stay on top of things.

DATA SHARING FOR CONSISTENT PROCESSES ACROSS ALL BORDERS

Many companies contribute to a new product. CONTACT Collaboration Hub ensures that all data is always available and up-to-date across organizational and system boundaries. It simplifies data flows through intelligent data sharing and creates end-to-end processes, making it ideal for collaborating with partners and integrating suppliers.

DIGITAL TWIN PLATFORM FOR SMART AND CONNECTED PRODUCTS

Innovative solutions for the Internet of Things connect people, machines, and components with powerful software services to create end-to-end business processes. This leads to new digital business models and smart, sustainable factories. With CONTACT Elements for IoT, companies realize offerings around the digital twin of industrial assets quickly and cost-efficiently. The software is based on an open architecture and follows the low-code/no-code principle. It maps business processes simply and robustly and enables comprehensive energy management.

**The world's best platform to
design and operate smart products**

**Master the entire
product lifecycle**

**Engineering project
excellence**

**Share processes and data in
your engineering value chain**

industrial processes**

EASILY COMBINE APPLICATION MODULES

Companies expect robust and open solutions that can be easily extended and integrated with existing systems. That is why we have developed CONTACT Elements. Elements is the motor of our products. All application modules can easily be combined to create integrated solutions. Thus, individual modules quickly turn into a comprehensive system.

CONTACT CONSULTING

In times of massive change, we help companies to stay ahead of the global competition. Our consultants provide a high level of solution expertise in the areas of digitalization, Sustainability, IoT, AI, and new business models: from strategic consulting, proofs of concept, and process optimization to the final implementation and training. You benefit from a high level of agility and immediately usable consulting results.
